

step by step. digital. networked

Digitalisation from A to Z

EVO
INFORMATIONSSYSTEME

A strategic partner for your digitalisation

We have been digitalising SMEs in the manufacturing industry for over 25 years. With the **digitalisation** and **automation** of processes, we help companies to master the challenges of the future.

We accompany our customers as digitalisers and process optimisers.

The **economic success of our clients** is our focus.

As a **software manufacturer**, we develop solutions for today, tomorrow and the day after tomorrow. We make technical innovations and technological leaps usable for our customers in operational practice.

**Let's shape your future together - at eye level.
Start by contacting us!**

Smart Factory
Industrie 4.0 Robotics
Artificial intelligence

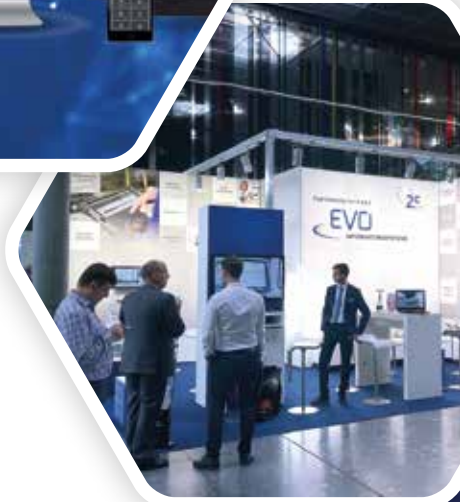

The turbo of your digital EVOLution!

As a manufacturer of industrial software, we offer you turn-key and **tried-and-tested solutions** for step-by-step and holistic digitalisation.

It is rare that we can start from scratch at customers. We offer you a unique and comprehensive software platform for a factory operating system, from which you can **integrate individual software modules into your company step by step**. You determine the pace and the scope!

- modular system
- from A to Z
- networks business processes, machines and supply chain
- turn-key – ready for immediate use
- well-engineered and proven thousands of times in Europe

EVOcompetition

ERP software – the digital heart for top performance in competition

Many ERP systems do not perform what is expected of them. Expensive customising – long introduction phase – inflexible in handling – lack of functionality in production planning. These are all reasons to look for alternatives. With EVOcompetition you have found the solution! With individually configurable software options, we map your requirements exactly.

- digitised business processes
- production planning and detailed production planning
- personnel planning in production
- production data acquisition with the help of apps
- digital shop floor management
- warehouse logistics and localisation of objects and orders
- communication in the supply chain
- business data analyses

With our potential check, we look at your starting situation and work processes in the company. Immediately afterwards, we will show you the opportunities of digitalisation with EVOcompetition. Put your business organisation to the test!

Metalworking - Mechanical engineering - Automotive suppliers - Medical technology - Aerospace - Plastics processing - Sheet metal processing

EVOjetstream

Holistic data management for documents, product data and machine data

The problem is not that you do not have data, but that you cannot find it, or do not know if it is the right data. With EVOjetstream you **bundle** and **structure** your data in a protected vault system. It versions data, archives and makes the data and documents available paperless in the office and in production. In addition, the DNC system communicates with the machine tools and exchanges CNC programmes and tool measurement data. In addition, tools and tool usage times can be read out from the machines.

- structures, classifies **all data** and **documents**
- **versions, protects** and archives **your data**
- **networks** and **communicates** with **CNC machines**
- **automatically** creates tool lists for faster set-up
- enables **paperless office** and **paperless manufacturing**

EVOperformance

The MES system for real machine running times and 100% transparency

EVOperformance allows you to get the **maximum performance** out of your machinery. Detect malfunctions and standstills at an early stage in order to eliminate their causes in a targeted manner. With **real-time monitoring** of the machines, you always have an overview of the current production situation. Both old and newer machines can be retrofitted to **record machine conditions without gaps**.

With the order-related logging of machine running times, you gain better times for post-calculation.

- **real-time monitoring** of machines
- status display of the machines
- logging and evaluation of machine states
- **PDA feedback** to third-party ERP systems
- planning and documentation of **maintenance**
- **retrofitting** older machines with MDE box

EVOtools

Digital tool organisation from suppliers to the machines

Good **tool organisation from A-Z** is the basic prerequisite for short set-up times and reliable machining on the machine – EVOtools makes all this possible.

Starting with the **clear identification** of tool components and complete tools. On the **procurement** and **stockpiling** of tools. Tool preparation for orders. You can realise a holistic tool management step by step up to the **use of the tools in the machine**.

- **clear labelling** of the tools
- central database with all tools
- **tool technology data** for CAM and presetting
- **inventory monitoring** of tools across all storage locations
- **availability** from the cutting edge to the complete tool
- connection to all common storage systems and dispensing machines
- **data exchange** with CAD/CAM systems
- **automated** orders
- cost and consumption evaluations

!Start-up after half a day of training Licence rental already possible for less than 100€ per month.

future-proof

A large customer base with > 1,250 customers is the secure basis for the continuous further development of the solutions.

innovative

We are already developing the solutions of tomorrow and the day after tomorrow.

fastest implementation

Installed ready for operation within one day.
No special programming required.

profitable

Start risk-free, without a large budget with the attractive software rental. Alternatively, licences can be purchased or switched from software rental to purchase.

scalable

Uniquely comprehensive software spectrum from A to Z from one software developer. Uniform operating concept. Interface-free. Expandable at any time.

inspiring

We can inspire with our solutions. Motivated employees drive digitalisation forward. You don't need to persuade anyone.
